

Executive Diagnostic Report

PMOS™

Program: Sample ERP Transformation - Diagnostic date: June 2026 - Engine v1.0

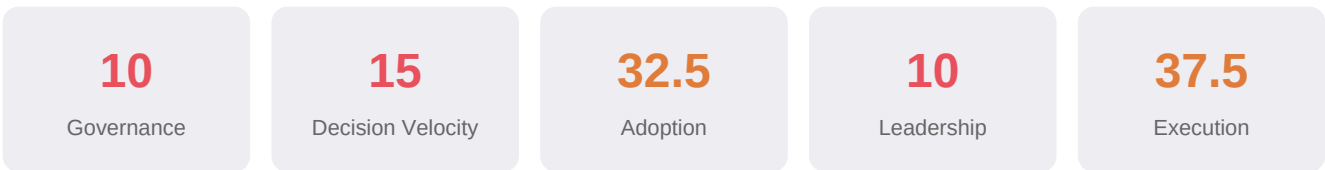

EXECUTIVE SUMMARY

The entire transformation rests on one or two people. Their departure would collapse it. The program is also being strangled by its own governance - process has replaced delivery. Builder culture is weak: problems are discussed rather than resolved, and ownership is thin, which amplifies every other pattern. Overall, this program shows 3 critical and 1 elevated patterns. The dominant failure driver is Hero Dependency™.

PMOS PATTERN SCORES

PMOS HEALTH INDEX

OVERALL PMOS HEALTH

21 / 100

Diagnosis

PMOS™

Primary, secondary and tertiary behavioral patterns - ranked by severity

PRIMARY DIAGNOSIS - HERO DEPENDENCY™ (95/100, CRITICAL)

The program has no resilience. One or two individuals hold the knowledge, make the decisions, and drive every workstream. Burnout is imminent and succession is non-existent. The organization has outsourced its transformation to its heroes. This is the failure driver.

SECONDARY DIAGNOSIS - DEATH BY GOVERNANCE™ (90/100, CRITICAL)

Oversight has metastasized. Every decision requires a forum, every forum requires a deck, and the deck requires its own pre-meeting. Delivery capacity is being consumed by the machinery meant to support it.

TERTIARY DIAGNOSIS - NOBODY WANTS TO DECIDE™ (85/100, CRITICAL)

No decision has a true owner. Everything is aligned on and nothing is decided. The program mistakes consensus-seeking for progress, and the cost is compounding delay on every dependent workstream.

RISK FORECAST

Risk forecasts are computed from weighted combinations of the five pattern scores using the PMOS risk model. They quantify behavioral exposure, not schedule mathematics.

Recovery Prescription

PMOS™

Diagnosis-matched interventions from the PMOS Intervention Library

RECOMMENDED INTERVENTIONS

LEAD WITH

Builder Culture Launch™ + Sponsor Activation Sprint™

Treats the primary pattern. Converts hero knowledge into organizational capability and re-activates sponsorship so escalations stop routing through individuals. 90-day program; resilience tested at day 60.

THEN

Governance Reset™ + Meeting Reduction Protocol™

Treats the secondary pattern. Kills non-deciding forums, collapses approval chains to two signatures, and converts status meetings to written exceptions. Recovers 15-25% of delivery capacity.

INSTALL PERMANENTLY

Risk Escalation Framework™

Removes heroes as the informal escalation path: every risk gets a single owner, an age limit, and an automatic escalation route. One week to install, permanent thereafter.

30-60-90 RECOVERY SEQUENCE

Days 0-30	Map the hero load and assign successor pairs. Contract the sponsor (weekly decision slot, visible communications). Run the governance kill-test and cancel non-deciding forums.
Days 31-60	Weekly build sessions transfer capability from heroes to successors. Approval chains collapsed to two signatures. Decision Ownership Matrix published and aging in public.
Days 61-90	Resilience test: key individual offline for a full week; gaps become the remaining transfer backlog. Re-run the PMOS diagnostic - Hero Dependency™ should drop at least one band.

Next step

Full step-by-step playbooks for every intervention above are in the PMOS™ Recovery Toolkit.
